

FISHER–NEYMAN EXCHANGE

(N) “So long as the *average* (italics in original) yields of any treatments are identical, the question as to whether these treatments affect *separate* yields on *single* plots seems to be uninteresting and academic ... ”

(F) “... It may be foolish, but that is what the z [FEP] test was designed for, and the only purpose for which it has been used. ...”

(N) “... I believe Professor Fisher himself described the problem of agricultural experimentation formerly not in the same manner as he does now. ...”

(F) “... Dr. Neyman thinks another test would be more important. I am not going to argue that point. It may be that the question which Dr. Neyman thinks should be answered is more important than the one I have proposed and attempted to answer. I suggest that before criticizing previous work it is always wise to give enough study to the subject to understand its purpose. Failing that it is surely quite unusual to claim to understand the purpose of previous work better than its author.”
